Novneurin (NOVNEUR) is a member of the Ig-like domain superfamily. It is a transmembrane protein with 19 Ig-like domains. The first 18 domains are extracellular, and the 19th domain is transmembrane. The protein is involved in cell-cell interactions and is expressed in the nervous system.

Figure 5

**ClustalW for NOVNEUR:**

Based on this alignment, black outlined amino acid residues indicate regions of conserved sequence (i.e., regions that may be required to preserve structural or functional properties); greyed amino acid residues can be mutated to a residue with comparable steric and/or chemical properties without altering protein structure or function (e.g., L to V, I, or M); non-highlighted amino acid residues can potentially be mutated to a much broader extent without altering structure or function.

**Sequences used:**

### ClustalW for NOVINTRA A:

Based on this alignment, black outlined amino acid residues indicate regions of conserved sequence (i.e., regions that may be required to preserve structural or functional properties); greyed amino acid residues can be mutated to a residue with comparable steric and/or chemical properties without altering protein structure or function (e.g. L to V, I, or M); non-highlighted amino acid residues can potentially be mutated to a much broader extent without altering structure or function.

### Sequences used:

- 1) X86458spoil1 (cDNA encoding a human spoil-I protein); X86459spoil2 (cDNA encoding a human spoil-II protein); X89432-il1delta (human IL-1 delta encoding cDNA); Q14628 (intracellular IL-1 receptor antagonist type II-human); G512010il1beta (ovine IL-1 beta - pig)

### ClustalW for NOVINTRA C:

Based on this alignment, black outlined amino acid residues indicate regions of conserved sequence (i.e., regions that may be required to preserve structural or functional properties); greyed amino acid residues can be mutated to a residue with comparable steric and/or chemical properties without altering protein structure or function (e.g. L to V, I, or M); non-highlighted amino acid residues can potentially be mutated to a much broader extent without altering structure or function.

#### Sequences used:

- 1) IL1X\_MOUSE: Locus - IL1X\_MOUSE; Accession - P25085; PID - g124313
- 2) IL1X\_HORSE: Locus - IL1X\_HORSE; Accession - O18999; PID - g6166230
- 3) AAF02757\_HUMAN: Locus - AF186094\_1; Accession - AAF02757; PID - g6049805
